

# Killamarsh Medical Practice

The NHS is moving into a new era of information sharing. We have two areas of information sharing which require a decision from you as a patient.

## The Summary Care Record (SCR)

You may recall receiving a letter on the subject of the National Summary Care Record (SCR). Your SCR contains up to date information relating to your medications, any allergies and adverse reactions you have, only. You will always be asked by the clinical staff for your permission to view your SCR. (You may have already opted out of this service).

I have decided to opt in -

I have decided to opt out -

## Enhanced Data Sharing Model (eDSM)

This is a local information sharing initiative for Healthcare units using the same computer system as your GP Practice. With your permission it allows services such as District Nurses, Physiotherapy and some hospital departments, to share your **detailed** GP record. It also allows the GP to view what other units record about you, with your consent. We have 2 questions for you.

### **Are you happy for.....**

Information on our computer system to be seen by Clinicians treating you in other health care settings who use the same system? YES  NO

### **Are you happy for.....**

This practice to view the information recorded about you at other healthcare settings who use the same system? YES  NO

If the above applies to all members of your family please list other family members below and we shall update their records also. If their preference is different to yours please request another form.

Other members of your family this consent applies (Please print):

.....  
.....  
.....

Your Name (print):.....Date of Birth:.....

Address:.....

Your Signature:..... Date:.....

You can change your decision on any of the above at any time by letting your GP practice know.

***Please hand this form in at reception, thank you***
